

XERAGEL™ Silicone Gel Ointment

for keloid and hypertrophic scars

Xeragel™ is a 100% silicone ointment, designed for convenient, regular application over small scars. Perfect for discreet application on scar treatment sites where silicone gel sheeting would be inconvenient, impractical, or unsightly.

Xeragel™

Silicone Ointment for Beautifully Healed Skin

The effectiveness of Epi-Derm™ with the convenience of an ointment

Designed for:

- Hands & Arms
- Face
- Neck
- Elbows
- Feet & Ankles

“How does it work?”

Scars need an “ideal healing environment,” meaning the appropriate balance of moisture and maximum exposure to oxygen. Xeragel™ is a fully-encapsulating gel — it completely covers the scar treatment site for uniform treatment of the entire site. Although the entire site is covered, Xeragel™ is semi-permeable when applied, allowing oxygen to enter while keeping excess moisture out — the ideal environment for healing scar tissue.
